SUMMARY

Senior Technical Program Manager with 10+ years driving end-to-end product and platform launches at scale — including the global launches of HBO Max, Max, and Discovery+ to 100M+ users across CTV, web, iOS, and Android. Currently at Apple, coordinating launch trains for News and Stocks across research, engineering, product, infrastructure, and partner teams. Known for bringing structure to ambiguous, high-stakes programs: sequencing dependencies, navigating speed-vs-quality tradeoffs, and earning trust through deep engagement with the technical details. Hands-on with frontier AI — actively building applications on the Claude and OpenAI APIs (RAG, MCP, tool use, AI-assisted review pipelines), with a recent Cornell AI program completion. Deeply motivated by Anthropic's mission and the work of bringing capable, safe AI to users reliably.

AREAS OF FOCUS

Launch Program Management: End-to-end ownership of model, product, and platform launches; sequencing dependencies, managing risk, building playbooks and decision logs, and driving alignment across research, engineering, product, infra, and GTM teams.

Cross-Functional Execution: Translating between technical and non-technical stakeholders; navigating speed-vs-quality-vs-scope tradeoffs; influencing without authority; bringing structure to ambiguous, fast-moving programs.

AI / GenAI Fluency: Hands-on with the Claude API and OpenAI API — MCP servers, function/tool use, structured outputs, RAG, AI-assisted review pipelines. Comfortable engaging with ML engineers on eval design, model behavior, and rollout planning.

Release Engineering & Infra: CI/CD pipelines, build automation, telemetry, incident response; large-scale cloud (AWS, Azure, GCP), Kubernetes, microservices.

Stack: Python, JavaScript/TypeScript, React/React Native, Node.js, Swift, Kotlin, AWS (RDS, S3, Lambda, Redshift), Docker, Jenkins, GitLab CI/CD.

EXPERIENCE

Senior Engineering Program Manager | *Apple Inc.* 2024 — Present

- Lead end-to-end launch program management for Apple News and Stocks — coordinating submission trains across engineering, product, infrastructure, and partner teams that ship to hundreds of millions of devices.
- Own cross-functional alignment across multiple internal teams; sequence dependencies, navigate speed-vs-quality tradeoffs, and surface launch risks to leadership through structured updates and decision logs.
- Partner with engineering teams to integrate AI/GenAI capabilities into content delivery and personalization — defining program structure, eval criteria, and rollout plans for ML-powered features.
- Build and improve launch playbooks, automation, and telemetry that scale with growing complexity — reducing production regressions and shortening release cycles.

Senior Technical Program Manager | *Warner Media (HBO Max / Max / Discovery+)* 2021 — 2024

- Led end-to-end program management for the global launches of HBO Max, Max, and Discovery+ across the US, LATAM, and EU — delivering to 100M+ users on connected TV, web, iOS, and Android.
- Coordinated cross-functional workstreams across engineering, product, infrastructure, partner platforms (Roku, Samsung, LG, Sony, Xbox), and GTM — managing dependencies, risks, and tradeoffs at launch pace.
- Drove change management for the Max app rebrand — coordinated cross-org rollout, training, and support to drive seamless adoption with minimal user disruption.

- TPM on AI/GenAI initiatives: shipped ML-powered personalization and content-discovery features, including evaluation criteria and quality gates for model-driven launches.
- Implemented mobile CI/CD pipelines that cut deployment time by ~50% and standardized release processes across the full device matrix.

Lead Technical Program Manager | *beIN Sports Media Group* 2019 — 2021

- Led the launch of a new OTT platform for the US/Canada market across iOS, Android, and Roku TV — owning scope, schedule, technical tradeoffs, and cross-functional execution end-to-end.
- Scoped and executed migration of critical infrastructure to AWS; deployed a microservices-based application on Kubernetes with auto-scaling, rolling updates, and horizontal pod autoscaling.
- Established launch operational health practices (monitoring, incident response, on-call rotations) that kept the platform reliable through major live-sports traffic spikes.

Staff Technical Program Manager | *Worldwide Cargo Logistics* 2016 — 2019

- Led and mentored a team of TPMs delivering mobile applications across a diverse product portfolio.
- Implemented Agile practices — sprint planning, backlog management, retrospectives — and ran scrum teams through full delivery cycles.

AI / ENGINEERING PROJECTS

Aila — *Founder / Lead Engineer (active build)*

- Designing and building an AI-enhanced marketplace platform from 0-to-1: full-stack on React / React Native / Node.js, deployed on AWS (RDS, S3, Lambda, Redshift), with Stripe Connect, Auth0 OAuth, and Mapbox.
- Integrated Claude and OpenAI APIs for AI-assisted content review and approval, automated moderation, AI-generated recommendations, and ROI analytics.
- Built evaluation criteria and review workflows around model outputs to ensure quality, safety, and brand-fit before content goes live — applying responsible-AI patterns end-to-end.
- Architected auto-payment logic tied to performance metrics, OAuth flows for Google/Apple/Facebook/X, and a map-based discovery experience.

EDUCATION

Artificial Intelligence Program | *Cornell University* 2025

Coursework across neural networks, deep learning, generative AI, eval design, and AI governance.

Cloud Computing | *The University of Texas at Austin* 2023

Full Stack Web Development | *University of Miami* 2020 — 2021

M.S., Marketing | *Florida International University* 2018 — 2019

Master's, Project Management | *Universidad de las Américas* 2014 — 2016

B.B.A. | *Universidad de las Américas* 2007 — 2012

ADDITIONAL

Languages: English, Spanish (fully bilingual). **Interests:** AI safety and responsible AI development; two-time Ironman finisher, training for Ironman 70.3.
